Daystate Accessories

BKL Scope Mounts

Engineered to fit your Daystate rifle perfectly. When fitted to Daystate rifles, BKL mounts provide spot-on alignment and the perfect scope height. Fits 25 mm (1 inch) and 30 mm tube scopes in a choice of single or double top strap types.

Daystate Peaked Cap

A stylish Daystate branded peaked cap with 3 embroidered panels.

Daystate Polo Shirt & Fleece Jacket

Quality is the byword for this attractive Daystate branded clothing. Thick black fleece with embroidery on front, arm & a large rear Daystate Logo. Polo shirt is available in black or yellow with two embroidered panels.

Easy Fit Sling Kit

A complete rifle sling and Quick Detachable swivel kit. One hand adjustable sling in top quality polypropylene. Full fitting instructions included. Plain sling without swivels also available.

Bullets

Made exclusively for Daystate for our Air Ranger when producing power in excess of 50 ft/lbs energy, 5.5 mm (0.22 inch) and 6.25 (0.25 inch) calibre.

FT Pellets

Specially selected to match our premium grade Walther barrels. Daystate FT pellets are the choice of champions with hundreds of Hunter Field Target and Field Target wins to their credit. Available in 4.5 mm (0.177 inch) and 5.5 mm (0.22 inch) calibre.

Double Slide Magazine

Tandem 10-shot magazines make fumbled magazine reloads a thing of the past.

Carbon Compact Silencer

When used as a second stage unit on our X2 and MK3 rifles, this lightweight Carbon Fibre silencer is remarkably effective. Matching the performance of many units twice its length. 11 cm (4 1/4") long. Carbon Fibre finish.

[a] Airstream II Silencer - the next level of silencer design

Introducing the Airstream II silencer which incorporates new sintered plastics technology to reduce muzzle noise down to a whisper. Screw fits to the standard 1/2 inch UNF silencer thread fitted to the end of our rifles. 18 cm (7") long. Satin finish.

[b] Muzzle Flip Compensator

The Muzzle Flip Compensator reduces much of the barrel movement on firing without destabilizing the pellet.

Daystate Electronic Rifles...

taking air rifle shooting into a NEW era !

Capacitive Discharge Technology - Daystate is the first company to use a fully electronic firing system. With no internal hammer or conventional trigger mechanism, CDT rifles are fast, twice as fast as conventional firing systems. A bolt action that is supremely easy to use, as the bolt only has to operate the rifle's 10-shot magazine and to seat the pellet directly into the rifling.

One of the safest systems ever, Daystate supply a key with each rifle, which when used, immobilises the rifle. Power comes from a rechargeable battery capable of allowing many thousands of shots. Add to this an electronic safety catch, match trigger, multiple power settings, shot counter together with that indisputable Daystate quality and you will then understand why so many shooters are going electric.

AirWolf

The super efficient CDT system combined with a 400 or 500cc bottle results in a huge shot capacity and, if required, potential for higher power. The full-length silencer combined with our electronic system makes this rifle almost completely silent.

MK3 ST

Beautifully balanced 10-shot rifle fitted with a superb walnut thumbhole stock. Latest version of CDT system with its new 'Lean Charge' electronics allow for more power and faster firing.

MK3 S

Quick handling and stylish sports stock fitted to the latest lean charge version of the MK3 electronic firing system.

MK3 FT-R

The New FT-R combines the new MK3 lean charge electrics with a pneumatic regulator for a greater amount of shots per charge. Fitted with an adjustable walnut stock, single-shot tray and Muzzle Flip Compensator.

Daystate the company...

Daystate was the very first company to produce modern pre-charged pneumatics with designs dating back to the early 1970's. Nowadays we combine those traditional gun-making techniques with the latest computer-controlled technology. Pure craftsmanship is a vital factor in Daystate rifles and our state-of-the-art CNC production machinery allows us to combine modern technology and the craftsmanship of a bygone age to bring you... **the world's finest air rifles.**

Specification...

Daystate rifles are supplied in left or right hand versions, complete with filling connectors, an integral sound moderator, ten shot magazine or single-shot tray and a detailed user handbook. A range of accessories can also be bought to further enhance your air rifle.

Customer Service...

Daystate prides itself on its outstanding customer service. Daystates are built to last and every rifle carries a 3-year warranty with a full back up service by factory-trained engineers.

Daystate... Welcome to the next level!

Built in moderator

The Mk3 has a built in sound moderator that significantly reduces noise. The muzzle is also threaded to take an additional silencer. Using this second silencer makes the gun virtually inaudible in the field.

Electronic trigger lock

Each rifle is fitted with a key-activated electronic isolator, preventing unauthorised use and adding another level of safety.

10-Shot magazine

This tough, quick-loading removable magazine can be fitted from either side of the rifle. The visual spy holes show shot availability at a glance.

Single-shot tray

Removing the magazine and fitting a magnetic pellet tray allows loading directly into the match grade Walther barrel.

Electronic firing system

The Harper patented CDT system delivers a huge increase in performance over mechanical systems in terms of lock time. It gives a smooth firing cycle equalling greater efficiency and, ultimately, superb accuracy. At the heart of the new CDT system is a microprocessor that controls power delivery and provides a superb multi-adjustable match grade electronic trigger. The system contains 16 digitally accurate power settings, as well as an audible and visible magazine empty warning and shot counter to let you know when the rifle needs refilling with air and pellets.

Safety

CDT electronics makes these the safest airguns ever. When the safety catch is applied the internal micro-processor cuts power to the rifle. In addition there is an Auto-Safe feature that automatically inhibits firing if left unused.
